

## Priority Strategic Issues

### **CHILD HEALTH**

Every child grows up without preventable hospitalizations, with health education to establish good health behaviors, in environments that support health.

### **OBESITY**

Everyone maintains or attains a healthy weight. Everyone has access to healthy foods and physical activity opportunities.

### **SAFETY and SOCIAL CONNECTION** (Social Determinant of Health)

Everyone lives in a safe neighborhood or community, and social connections are established and supported.

### **HEALTHCARE**

Everyone has affordable, timely, and reliable access to high quality primary and specialty healthcare services in ambulatory and hospital settings.

### **CONNECTION to RESOURCES**

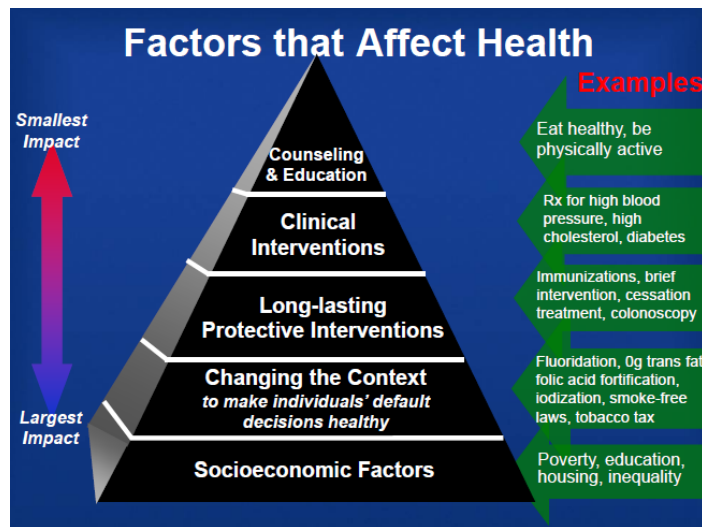

Everyone is connected in a timely way to community resources, programs, and supportive services. Gaps are identified and filled. Everyone has basic resources to live in good health.

As ranked by Advisory Committee on 8/2/2012:

- 111 Access to Quality Healthcare
- 88 Access and Utilization of Community Resources
- 87 Health Education → shift to STRATEGY under other areas, esp. CHILD HEALTH, OBESITY
- 71 Child Health
- 77 Obesity
- 67 Access to Healthy Food → shift to STRATEGY under OBESITY
- 66 Safe and Connected Neighborhoods and Communities

As ranked by Dialogue Participants (measured by volume of strategies/ideas for impact)

- Access and Utilization of Community Resources
- Access to Healthy Food → shift to STRATEGY under OBESITY
- Access to Quality Healthcare
- Safe and Connected Neighborhoods/Communities
- Health Education → shift to STRATEGY under other areas, esp. CHILD HEALTH, OBESITY
- Mental health (*incl. stress, depression, access*)
- Financial Stability
- Overall Education Achievement
- Access to Physical Activity → shift to STRATEGY under OBESITY

The CDC's Intervention Health Impact Pyramid (T. R. Friedan, AJPH, Apr 2010)

Intervention types are prioritized by the impact on population health; i.e. socioeconomic factors have very strong impact on health, whereas counseling and education have a limited impact on health because they rely on successful behavioral change at the individual level.
